SnowdropKCS Time & Attendance Software

SnowdropKCS Time & Attendance software provides real-time technology for vastly improved workforce control. Real-time means that you can see data updates as soon as they're made and because it's online, the system can be accessed from anywhere, at any time.

It's designed to be flexible, so it doesn't matter how complex your rotas or working patterns are, the time & attendance module can help you manage them. This means it's suitable for any size or structure of organisation that's looking for better workforce control.

Understand your workforce better

It's not just about tracking your employees' whereabouts, it's about making sure once you've got your data it makes sense to you. That's why we offer sophisticated workforce analytics tools, which help you with spotting absence trends for example, or identifying habitual lateness. Preventing unnecessary disruption to your business.

The time & attendance system includes:

- Unlimited shifts, rosters, access profiles and working patterns
- Flexible working/flexitime
- Full absence management and attendance analysis
- Leave entitlements and leave planning
- Real-time and graphical attendance monitoring
- Shop floor/job costing
- Project planning and costing
- Access control management
- Software or hardware based employee registrations
- Project costing and resource management, planning and analysis

The time & attendance system works well on its own, but can also integrate with our [payroll software](#). All data related to payroll is automatically transferred, so that information isn't duplicated or out-of-date. Allowing you to make payroll calculations with confidence.
